About Our Project

Today, handling documents for both individuals and businesses should be done effectively in this digital age. The project aims to provide an easy-to-use desktop application written in C# and SQL that will have the ability to scan physical documents and automatically recognize text through OCR and organize these documents in a structured and searchable format. This is to ensure that document management can be as straightforward and efficient as possible, where users can group their documents into categories, tag them, and access them without much hassle.

Literature Review

Currently there are following apps in the marketthat use AI to enhance document scanning, OCR and organization.

Ex :-

- DocuScan
- DocuPhase
- iScanner

But in here we expect to reach more UX than these apps.

Project Objectives

01 Provide an easy-to-use solution for digitizing physical documents.

02 Utilize OCR technology to extract and store text, making documents searchable.

03 Enable users to organize documents into categories and folders.

04 Ensure user data is secure with authentication and encryption features.

Project Scope

1. Document Management:
   - The users will be allowed to create, rename and delete folders along with their subfolders.
   - The user will be able to document categorization and tag documents so finding becomes easier.
2. Search and Retrieval:
   - The users will be provided with the facility to search for documents based on their text content or tags.
3. Database Integration:
   - The documents and related information such as tags, categories, etc., are stored in a SQL database.
4. User Authentication:
   - User authentication should be implemented to keep personal documents secure.

Project Scope

Optional Features if time allows

1. Cloud Storage Integration:
   - Synchronize documents with cloud services like Google Drive or Dropbox.
2. Handwritten Text Recognition:
   - Add support for handwritten notes or from OCR.
3. Collaboration:
   - The facility for the sharing of documents or folders between users.

System Requirements

C#-Windows Forms or WPF

- To be used in giving the interface through which the user would be able to scan, upload and manage documents.

Frontend (UI/UX)

C#

- The business logic of the system, file handling and interaction with the database will be created .

SQL Server

- Document storage, handling metadata associated with the documents, as well as management of search indexes.

Backend

Tesseract or Google Vision API

- OCR on the given documents.

Third-Party API

Basic User Authentication Using Some C# Libraries

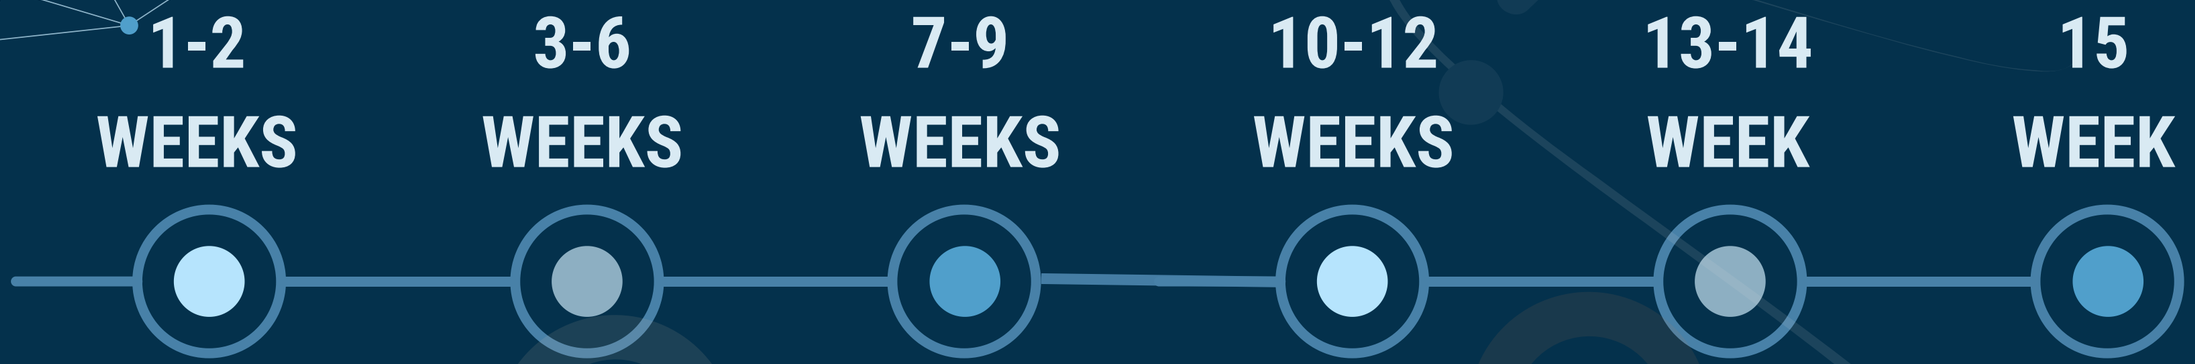

- Optionally encrypt documents, safely stored using AES encryption.

Security

Project Timeline

1-2 WEEKS	3-6 WEEKS	7-9 WEEKS	10-12 WEEKS	13-14 WEEK	15 WEEK
PHASE 1	PHASE 2	PHASE 3	PHASE 4	PHASE 5	PHASE 6
RESEARCH, PROJECT PLANNING, CREATING PROPOSAL AND PRESENTATION	FRONTEND AND BACKEND DEVELOPMENT	OCR INTEGRATION AND DOCUMENTS SCANNING FEATURES	SEARCH, CATEGORIZATION AND DOCUMENTS MANAGEMENT FEATURES	SECURITY FEATURES (USER AUTHENTICATION, AES ENCRYPTION)	FINAL TESTING AND DEPLOYMENT

Project Timeline

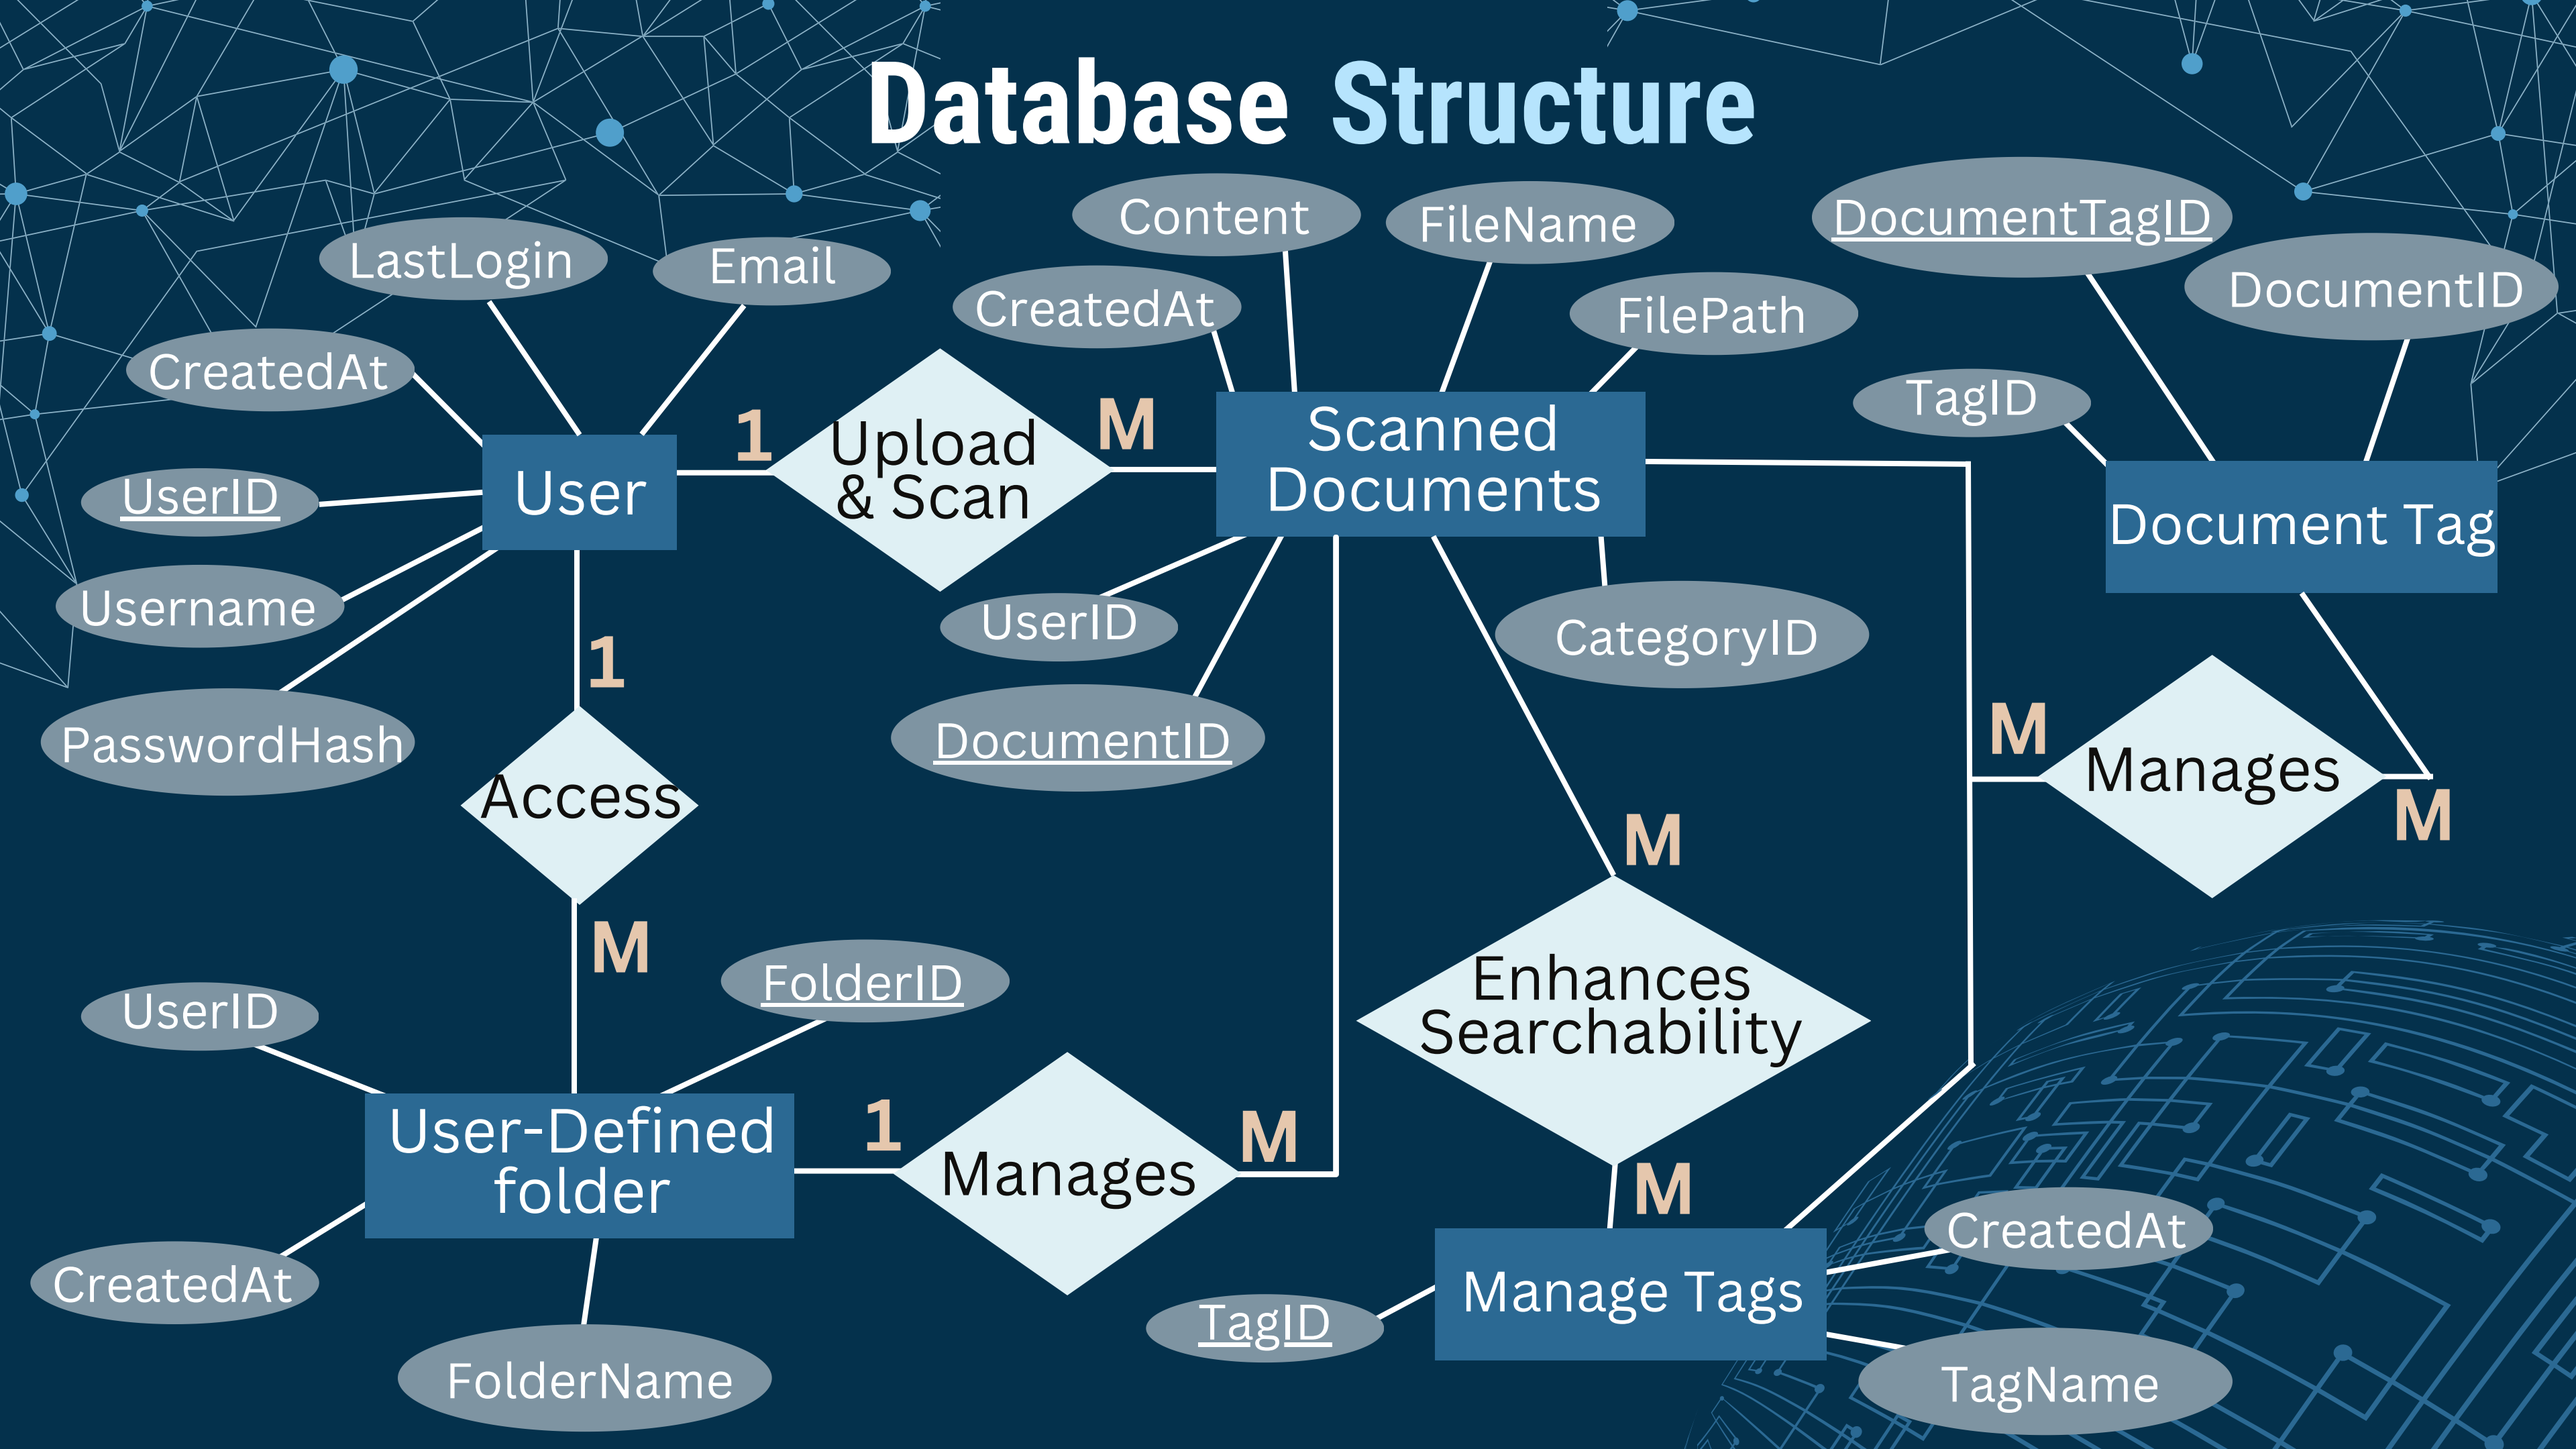

Total Duration : 15 Weeks

Target Audience

- **Educational Institutions** -Schools, Colleges & Universities
- **Law Firms & Legal Departments** -Corporate Legal Departments
- **Healthcare Institution** -Hospitals & Clinics
- **Financial & Accounting Firms** -Banks, Financial Institutions & Accounting Firms
- **Government Agencies** -Local, Regional & National Government Offices
- **Business & Startups** -Small & Medium Enterprises
- **Real Estate Agencies** -Real Estate Agents
- **Libraries & Archives** -Libraries & Archival Institutions
- **Research Organizations** -Scientific and Social Research Groups & NGOs and NON-Profits
- **Freelancers & Remote Workers** -Freelancers & Remote Teams
- **Individuals & Home Offices** -Home Offices & Small Businesses

Database Structure

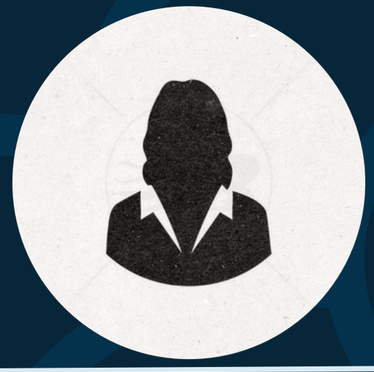

Project Conclusion

This will be a pragmatic, innovative document management project oriented towards simplicity and ease of use and towards effective organization. By offering features ranging from OCR and categorizing documents to securely storing them, this system encompasses all users' needs in one place concerning their digital and scanned documents.
